AUTOMATED, STANDARDIZED DELIVERY AND OPEN PROVISION OF PUBLICATION COSTS AND PUBLISHING AGREEMENTS

To foster fairness in science we are creating a technical infrastructure that allows us to comprehensively record all costs involved in scholarly publishing and subsequently make them freely accessible by means of standardized interfaces. This is supposed to enable cost transparency on an institutional, national, and international level.

INTEGRATING PUBLICATION COST DATA INTO INSTITUTIONAL REPOSITORIES

REALISATION STEPS:

1. development of a **standardized metadata schema**
2. OAI-PMH **interface** for an automatic exchange
3. **extension of the Electronic Journals Library (EZB)** with special functions for displaying publication costs

INFORMED AUTHORS

> ... will henceforth inform not only about reading rights, but also publication rights and options of each individual institution.
 > ... as the central platform for communicating OA information to researchers.
 > ... with cost information, journal category filter & output, display of memberships & transformation contracts with ESAC ID, adjustments of the EZB-REST-API.
